This Roku-Bundled TV Doesn't Need to Be Smart

You don't need a smart HDTV to get smart HDTV features. Sanyo offers the FVF5044, a decidedly non-smart, LED-backlit LCD HDTV that's "Roku Ready" (it has an MHL-capable HDMI port), and comes with the MHL version of the Roku Streaming Stick. Just plug the stick into the MHL HDMI port, and the FVF5044 becomes a smart HDTV. Its picture didn't wow us, but this TV is a solid performer with connected features through Roku, and good if you're looking for a big HDTV on a budget.

Sanyo FVF5044

\$494

DESIGN

Like most budget HDTVs, the FVF5044 looks plain. The LCD panel is framed by half-inch, flat, glossy black plastic bezels on each side, with an additional faux-brushed aluminum plastic strip on the bottom edge to hold the indicator light. It sits securely on a semicircular black glass base that holds the screen steady, but doesn't pivot. The overall design is understated and not particularly eye-catching, but it's attractive enough in a utilitarian sense.

A row of controls behind the right edge of the HDTV holds Channel Up/Down, Volume Up/Down, Input, Menu, and Power buttons. Two HDMI ports, including the MHL-enabled port, sit on the back facing left, alongside the antenna/cable connector and a USB port. A third HDMI port, a component video input, a VGA video input, a 3.5mm audio input and output, and an optical audio output face downward.

The included 6.6-inch remote is as plain as the HDTV itself. The buttons are flat, rubber, and not backlit, and are laid out in fairly cramped clusters around a navigation pad, which feels distinct enough from the number, volume, channel, and playback controls that you can easily find it without looking. The remote controls both the HDTV's menus for picture adjustments and the connected Roku interface, the latter accessible with a press of the Smart button. It doesn't have the glossy simplicity of the remote included with retail Roku devices, but it's functional.

ROKU FEATURES

The MHL-only Roku Stick didn't floor us on its own last year, but as a pack-in product with a Roku Ready HDTV it works very well. All you need to do is plug it in, and the FVF5044 will act as if Roku's interface is built into the HDTV. Roku offers hundreds of different online services and apps in the form of content channels, including all of the standards like Netflix, Hulu Plus,

Sanyo FVF5044

PROS Inexpensive. Very bright panel. Connected features with included Roku Streaming Stick.

CONS Cold, skewed colors. Only two HDMI ports available with Roku Stick installed.

What I *don't* like...

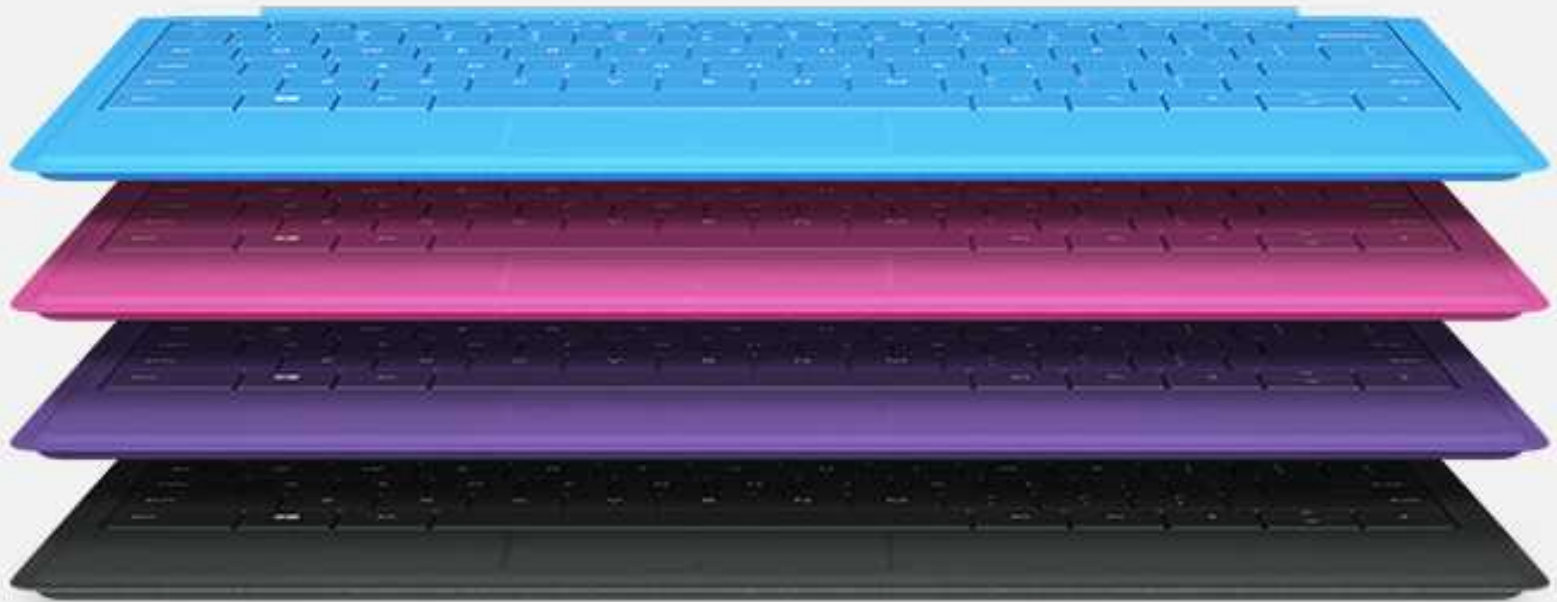

They are *pricey and heavier*
than a lot of tablets!

Power Supply Connector

Keyboard is *extra*

Mouse is *extra*

Pen is *extra*
